Frequently Asked Questions

Why, after a successful connection to the cable network and on completion of all settings, an error occurs in accessing the network?

First, check whether you have connected the network cable, and make sure your username and password is correct; We recommend visit any web page via mobile app or a Web browser, and using the smart error detection to find and resolve the problem. It may take a few minutes.

Error 678: The server operator does not take the same login

Remedy: once again pull out and reinsert the cable outer network, restart the fiber / home gateway / adsl modem, after 10 minutes, try to connect again.

Error 691: The server returns an error login password or expiration of your account.

Remedy: Check whether the user name and password or enter a login and password on the operator's website to check the details of payment services.

Is it possible to install the name of Wifi network (SSID) in Chinese? Why sometimes I have distorted name of Wifi network?

Mi router supports Chinese names in Wifi network, but for the normal functionality, you must be connected to the router device (smart phone / pad / computer) that also support Chinese SSID.

Why after the switching of a router, the red light flashes?

The red LED indicates a system error or a problem with the operation of the device, and indicates that you are in safe mode.

During safe mode, all the data stored on the router, be protected. You can restore the normal operation of the device firmware via USB or call maintenance to repair this issue.

At constant red light is lit, the data stored on the router, not lost, however, problems arise on and working memory / card. To resolve this issue, you can send the router for repair or upgrade it, or contact by phone of service to address this issue.
